Senior Civil or Mechanical Engineer - Pump Stations – Wellington- 01660

Our successful Wellington Water team works nationally across a wide range of disciplines and as such client demand for our time is growing!

We are therefore seeking an outstanding pump station design engineer to join our team in the water (three waters) industry. You will have at least 5 years experience as a design engineer with substantial experience designing medium to large pump stations. You may have either a mechanical or civil background but must have plentiful water experience..

As a key member of our water engineering team, your role will be to deliver successful projects and will include:

Leading design teams- undertaking pipelines, pump stations and general civil works associated with wastewater, stormwater, irrigation and water supply projects and delivering technically excellent pump station engineering solutions.

As well as:

- Reviewing the technical outputs of others and provide mentoring to team members.
- Managing consulting commissions to achieve financially successful outcomes.
- Demonstrating excellent verbal and written communication skills.
- Building strong client relationships that will secure new business opportunities.

This is an ideal opportunity for you if you have built a solid technical foundation in your career and are now looking to work on major projects among industry leading experts.

For further information or to apply, please go to www.beca.com, for all other queries please contact Victoria Farrell on +64 9 336 9443 or at Victoria.Farrell@beca.com

Senior Civil Engineer - Stormwater – Wellington- 01734

We have a vacancy for Senior Civil Engineer - Stormwater to join our Wellington Water team.

Ideal applicants will be at a senior engineer level with strong technical skills in stormwater, including designing stormwater systems for water quality enhancement, and be looking to make the move into larger projects.

Experience in applying a 'three waters' approach to projects as well as advising and consulting with asset managers and stake holders are essential.

As a key member of our water engineering team, your role will be to deliver successful projects and will include:

- Leading design teams undertaking water supply projects.
- Delivering technically excellent stormwater engineering solutions including water quality improvement elements, flood mitigation and applying a 'three waters' approach to projects.
- Reviewing the technical outputs of others and provide mentoring to team members.
- Managing consulting commissions to achieve financially successful outcomes.
- Demonstrating excellent verbal and written communication skills.
- Building strong client relationships that will secure new business opportunities.

Experience a world of opportunity with progressive career development, a valuable reward structure and the potential for share ownership.

For further information or to apply, please go to www.beca.com, for all other queries please contact Victoria Farrell on +64 9 336 9443 or at Victoria.Farrell@beca.com

Senior Civil Engineer (3 Waters) – Christchurch- 01661

Our water engineering team in Christchurch specialises in the design of wastewater, stormwater, irrigation and water supply projects and is recognised as a major supplier of engineering consultancy services in the South Island market. We have an excellent record of delivering many of the large-scale projects in the region and have a strong forward workload. We would like you to be a part of our success.

We currently require a Senior Civil Engineer with strong technical skills to undertake design and lead design teams on a range of water-related projects. Ideal candidates will have 10 years successful track record in a consultancy environment and have a thorough knowledge of local government stakeholders in the industry.

As a key member of our water engineering team, your role will be to deliver successful projects and will include:

- Leading design teams undertaking pipelines, pump stations and general civil works associated with wastewater, stormwater, irrigation and water supply projects.
- Delivering technically excellent water-related civil engineering solutions.
- Reviewing the technical outputs of others and provide mentoring to team members.
- Managing consulting commissions to achieve financially successful outcomes.
- Demonstrating excellent verbal and written communication skills.

- Building strong client relationships that will secure new business opportunities.

An ideal opportunity if you are now looking to work on major projects among industry leading experts that can take your career to new heights. If you enjoy working for an organisation that values partnership, tenacity, enjoyment and cares for its people and clients, then look no further than Beca.

To apply to this position please do so at www.beca.com, or for further information please contact:
